Q&A

Why does the blood pressure data differ from sphygmomanometer?

The deviation of the measured data of the watch and the sphygmomanometer is determined by many factors. The measurement position of the sphygmomanometer is in the brachial artery, and the measurement position of the watch is in the two main branches of the arteriolas. Normally, The deviation of the aortic blood pressure and the arteriole blood pressure measured will be three to five years old. At the same time, because the blood flow is pulsed, at the same time, because the blood flowing in the artery is in the ventilation function. The sphygmomanometer will make the lower part of your elbow under pressure when measuring, and the blood cannot flow smoothly to the lower part. Vascular tension increased, which will cause greater deviation of upper and lower blood pressure measurements.

Why don't wear the watch during hot bath?

The temperature of the bath water is relatively high, and then it will produce a lot of water vapor As the water vapor is a gas, its molecular radius is so small, and it is easy to infiltrate from the gap of the watch case. When the temperature drops, it will condense into liquid water droplets, which will cause the short circuit of the internal circuit of the watch and damage the circuit board of the watch.

Note:

The waterproof is only for non-underwater life scenarios. Swimming,diving,bathing,sauna wet do not meet the warranty terms.

10

Q&A

Why the watch can't receive notifications?

Android phone settings:

1. Confirm that the notification reminding switch of the mobile phone has been turned on.

2. Confirm that the message can be displayed normally in the notification bar of the phone; The notification bar mobile phone is set by nearly the mobile phone notification message, if there is no message in the mobile notification bar, the watch will not be able to receive the notifications.

(Please find the notification settings of the phone, then turn on the notification switch of WeChat, QQ, phone, SMS)

Apple phone settings:

1. Confirm that the notification reminding switch of the mobile has been turned on.

2. Confirm that the message can be displayed normally in the notification bar of the phone;

(Please find the notification settings of the phone, then turn on the notification switch of WeChat, QQ, phone, SMS)
